Project Proposal: **Urban Harvest**

1. Abstract:

UrbanHarvest is an online grocery store platform designed to provide users with a convenient, efficient, and reliable way to shop for groceries from the comfort of their homes.

The system allows users to browse products, add them to a shopping cart, and place orders seamlessly. An interactive front-end includes pages such as Home, Shop, About Us, Contact Us, and My Orders for a complete user experience.

The platform also features an admin panel, built using PHP and MySQL/phpMyAdmin, which enables store management tasks such as adding, updating, and deleting products, as well as monitoring user orders. All user and order data is stored in a centralized database named "urban", ensuring efficient data handling and real-time updates.

The goal of UrbanHarvest is to modernize the grocery shopping experience by offering freshness, quality, and convenience through a user-friendly and manageable web application.

2. Group Members:

M Shahzaib (Group Leader) - P20-0473

Hadeed Bin Toufeeq - P20-0453

Hassaan Bilal - 22P-9072

3. Project Overview

At **UrbanHarvest**, we are committed to delivering the **freshest** and **highest quality grocery items** straight to your home. Our goal is to offer **easy, affordable**, and **reliable** online grocery shopping for everyone.

3.1 Objectives

- Provide an online platform for grocery shopping.
- Allow users to add items to cart and place orders.
- Enable admin to manage products and orders.
- Ensure fast and easy access to grocery items.
- Store and retrieve data from a central database.

3.2 Scope

- Users can browse and buy groceries online.
- Admin can manage inventory using the admin panel.
- Orders are tracked and shown in “My Orders”.
- Product details are stored and fetched from the database.
- Website is accessible from web browsers.

4. Functional Requirements

- User registration and login system.
- Add to cart and checkout functionality.
- Display list of available grocery items.
- Admin can add, update, or delete products.
- Order details saved and shown to users.

5. Non-Functional Requirements

- System should be responsive and user-friendly.
- Website should load within 3 seconds.
- Secure login and data handling.
- Easy database backup and recovery.
- System should handle multiple users at a time.

6. Technologies and Tools

- **HTML, CSS, JavaScript** – Frontend design
- **PHP** – Backend scripting
- **MySQL** – Database
- **phpMyAdmin** – DB management
- **XAMPP** – Local server

7. Timeline and Milestones

Week	Tasks
1	Design website pages
2	Set up database and backend
3	Add cart and checkout features
4	Admin panel integration
5	Testing and bug fixing
6	Final launch and report

8. Expected Outcomes

- A fully working online grocery store.
- Admin can manage all store activities.
- Users can shop and track orders online.
- All data safely stored in the database.
