

Urban Harvest - Report

Introduction

UrbanHarvest is an online grocery store designed to deliver the freshest and highest quality grocery items directly to customers' doorsteps. The platform ensures convenience, affordability, and premium service in the online grocery shopping experience.

Objectives

- Provide a user-friendly online platform for grocery shopping.
- Deliver quality products with convenience and affordability.
- Develop an admin system to manage all store activities.

Website Structure

The website includes the following pages:

- Home
- Shop
- About Us
- Contact Us
- My Orders

Functional Features

- Users can browse and add grocery items to their cart.
- A secure checkout system is implemented for placing orders.
- Orders are recorded and displayed in the 'My Orders' section.
- Real-time interaction with the database to fetch and display products and orders.

Admin Panel

An admin panel has been developed using MySQL and phpMyAdmin to manage the entire store. Admin functionalities include adding, updating, and deleting products, managing orders, and monitoring user activities.

Database Structure

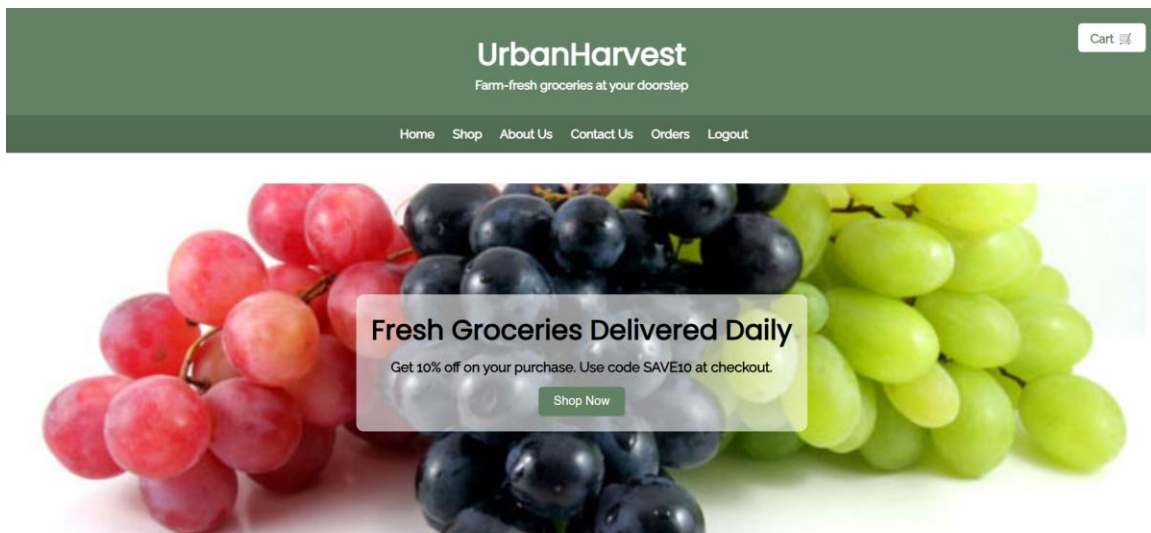

All the website data is stored in a MySQL database named 'urban'. This includes product information, user data, cart items, and order details.

Conclusion

UrbanHarvest successfully provides an easy-to-use and efficient platform for online grocery shopping. With dynamic features and a strong backend, it meets the needs of both customers and administrators.
